

Camino Real Landfill Permit Modification and Renewal

Site Improvements Since 2005

Camino Real Environmental Center (CREC) has made significant investments to build one of the most experienced landfill management teams in the industry. CREC employs over 20 individuals.

CREC has invested several million dollars in equipment and site infrastructure.

The Waste Inspection and Screening Program has been enhanced to include several (at least three) random waste screening inspections each day the site is in operation. The purpose of this plan is to detect unauthorized wastes from being disposed of at the landfill. Site personnel also receive extensive training in all aspects of this program.

The site has implemented a Particulate Emissions Reduction Plan, which addresses the minimization of particulate matter generated from the fleet of on-site heavy equipment. The site has also installed a weather station on-site to collect a wide range of meteorological data, which is used to develop strategies to further enhance the reduction of particulate matter generation at the site.
